In the name of God
Os Lab #Hw1

Write appropriate command(s) according to the questions below and show the result*:

1. Show last system logins.
2. Display a memory usage map of processes.
3. List system reboot history.
4. Run a Linux process in the background.
5. List files opened by running processes.
6. View or limit system resource amounts.
7. Display disk partitions, sizes, and types with the command.
8. See disk usage for all files and directories.
9. Show disk usage of the directory you are currently in.
10. Change the owner and group ownership of a file.

*: by getting a screenshot of both the command and its result.
